Christian Gößl

Resumé

Ad Astra per Aspera f

Personal information

Nationality: German

Civil Status: single

Languages

German: fluent

first language

English: good working knowledge

oral and written

Work

2020-now: Working and participating on: open source projects([zim-wiki](#), [noweb](#)), programming websites and documentations([my own website](#), [hsp website](#), games), data projects([Rad-Bahnhof-Index](#)), art([zen-garden](#)), zettelkasten scripts([ToText](#)), computational physics projects([simulations](#)), [machine learning](#) and more on my [GitHub account](#)

2020-now: Freelancer for programming projects and coaching for HSP und students in physics, math and computer science

2013-2021: Student assistant at it-department at Albert-Einstein-Institute in Golm

2011-2013: Storeman at Fruchtservice Eberswalde

2010-2011: Voluntary ecological year in Eberswalde at Wald-Solar-Heim

Computer Knowledge

General experience: Programming of open source projects, leading teams, project management, optimizing processes, websiteprogramming, Website migration, web-hosting(Wordpress ) , first and second level support, dataanalysis 

Office: LaTeX , LibreOffice , Microsoft Office  Office 365

Programming languages: HTML , Javascript , CSS , Git , C++ , Python , Matlab , Julia , Fortran , Bash , Markdown 

Operating system: Windows , Linux   , macOS 

Seminars

2026: 3. Place "Open Data enabled AI" DB Hackathon Anschluss Erreichen

2025: 2. Place "Rad-Bahnhof-Index" Potsdam Lab Hackathon-Rad-Data

2024: Machine learning course at University of Potsdam

2023: Numerical relativiy hydrodynamics course at University of Potsdam

2021: Graduate Days in Heidelberg, topics: Particle physics at low energy, Thermal field theory

2017: Jürgen Ehlers Spring School, topics: General relativity, Black holes, Gravitational waves

Research experience

Astrophysics seminar 2019: Presentation of current astrophysic papers. Cosmological radiative transfer and application. A paper about the UV background radiation and the process of photoionization in early universe.

Theoretical physics seminar 2017: Presentation of current theoretical physics papers. Investigation of fields of charged particles in hyperbolic motions. A paper about charged particles, which moving with the speed of light. The describing fields are violating the Gaussian law. The paper offers an solution.

Experimental physics seminar 2016: Presentation of current experimental physics papers. Nonlinear dynamics in reactions at solid surfaces. How to describe reactions at solid surfaces with nonlinear dynamics and experimental setups to investigate the reactions.

Research contacts for reference

Dr. Axel Kleinschmidt: Albert-Einstein-Institute for Gravitational Physics

Prof. Dr. Martin Wilkens: University of Potsdam

Education

Master of Physics

2015-2021: Master of Physics, University Potsdam

Courses: Advanced astrophysics, Introduction to general relativity, Trends in astrophysics, Advanced computational physics, Introduction to plasmaphysics

Master thesis: Aspects of field theories in higher derivative terms, about: General relativity, High energy physics, Ostrogradski instabilities, Field theory

Bachelor of Physics

2011-2015: Bachelor of Physics, University Potsdam

Courses:: Astrophysics, Computational astrophysics, Hydrodynamics, Computational Physics

Bachelor thesis:: Übergang zwischen kritischen und überladenen Lösungen bei Akkretionsscheibenwinden(Transitions between critical and overloaded solution at accretions disk), about: Stellar wind, Hydrodynamic, Line-driven winds, simulation

School

2010: Higher education entrance qualification in Eberswalde
